

ALEX CHEVRIER

Software Engineer | Distributed Systems & Kafka Infrastructure
Hong Kong | +852 55189053 | chevrier.alex@gmail.com |
linkedin.com/in/alex-chevrier-323365b4 | github.com/alchevrier

TECHNICAL SKILLS

Languages: Java, Kotlin, TypeScript, SQL | Frameworks: Spring Boot, Spring Kafka, React.js | Distributed Systems: Kafka, Message Queues, Binary Protocols | Tools: Docker, Kubernetes, AWS, Spock, JUnit

WORK EXPERIENCE

Morgan Stanley, Hong Kong | Data Service Application Developer (Contract) Nov 2025 - Present

- Designed and delivered a greenfield messaging service by reverse-engineering undocumented Python batch system and implementing streaming architecture using Spring Kafka, Spring Boot 4, and Java 25. Independently implemented TCP over SOAP integration with ADR-driven design approach.
- Maintain production Kafka infrastructure connecting isolated data centers across regions, ensuring cross-region data consistency across financial data pipelines.

We+, Hong Kong | Java Developer Sept 2023 - Nov 2025

- Rebuilt RHEL9 test environments from scratch after team ownership transfer, producing end-to-end documentation covering Apache configuration, load balancers, SSL certificates, and JKS setup — eliminating external team dependency.
- Migrated the highest number of microservices to Java 21 across a major French investment bank's FX platform.

LandyTech, London/Remote | Software Engineer Oct 2019 - Aug 2023

- Led front-end engineering team (3 engineers) for Sesame back-office application. Heavily contributed to monolith-to-microservices migration, introduced NX mono-repo, and automated risk data pipeline.

Redbite Solutions, Cambridge, UK | Software Engineer Nov 2016 - Oct 2019

- Built the web application from scratch and heavily contributed to full system redesign after the original architect departed. Identified missing authentication layer, designed and implemented OAuth2 using Spring Security, and upskilled teammates on the protocol. Introduced Kotlin and reactive programming with Spring WebFlux.

PROJECTS

Mini-Kafka | github.com/alchevrier/distributed-messaging

Built Kafka-like distributed log storage from scratch (append-only logs, binary protocol, partitioning with MurmurHash3). ADR-driven design, >50% test coverage, Java 25.

EDUCATION

ENSEIRB-MATMECA, Bordeaux, France | Master's Degree and Bachelor in Computer Science
2013 - 2016
